

# Commercial Diving and Marine Construction

ASI Group Marine Services specialize in underwater infrastructure inspections, marine construction and contaminated spill site remediation. Marine Services benefits from in-house engineering, remotely operated vehicle (ROV) and marine geophysical support to conduct all types of underwater operations.

Civil engineering inspections and underwater services are provided to water and wastewater treatment facilities, refineries, power generators, steel production and paper mills.

ASI routinely inspects, repairs and provides construction contracting services for intakes, outfalls, dams, bridges, pipelines and tunnels.

ASI dive crews have gained wide recognition for their experience at handling complex technical assignments. ASI's diving capability is complemented by ROV and dive support vessels, including the *ASI Clipper*, which comes complete with a double lock recompression chamber for deep diving operations.
